Single Crystal X-ray Diffraction Measurements

Single X-ray diffraction data was collected using an *Agilent SuperNova (Dual Source)* single crystal X-ray diffractometer using a micro-focus $\text{CuK}\alpha$ X-ray beam (50 kV, 0.8 mA) and an *Atlas* detector (135 mm CCD). The temperature was controlled with an *Oxford Instruments Cryojet5*. The data were processed using the *CrysAlisPro* program.¹ Structure solution and refinement were accomplished using the SHELX 2014 programmes.² The structure was solved by direct methods. All non-hydrogen atoms were refined anisotropically, while hydrogen atoms associated with carbon and nitrogen atoms were refined isotropically. Crystallographic and refinement parameters for crystal structures **2a** and **8b** and **4a** are given in Table S1.

1. CrysAlisPro, Agilent Technologies, Version 1.171.36.28 (2014).

2. Sheldrick, G. M. *Acta Crystallogr.* 2015, **C71**, 3–8.

Table S1. Crystallographic and refinement parameters for compounds **2a**, **8b** and **4a**.

compound	2a	8b	4a
empirical formula	$\text{C}_{23}\text{H}_{28}\text{N}_2\text{O}_2$	$\text{C}_{36}\text{H}_{37}\text{Cl}_6\text{N}_2\text{OPPd}$	$\text{C}_{20}\text{H}_{22}\text{N}_2\text{O}_2$
$M_r / \text{g mol}^{-1}$	364.47	863.74	322.39
T / K	150.0(1)	150.0(1)	150.0(1)
crystal system	monoclinic	triclinic	triclinic
