

Supplementary data, Figure 1: Integrity of the lipid mediators was assessed using characteristic UV chromophore by spectrophotometry and retention along characteristic MS-MS fragmentation in LC-MS-MS.

AT-RvD1

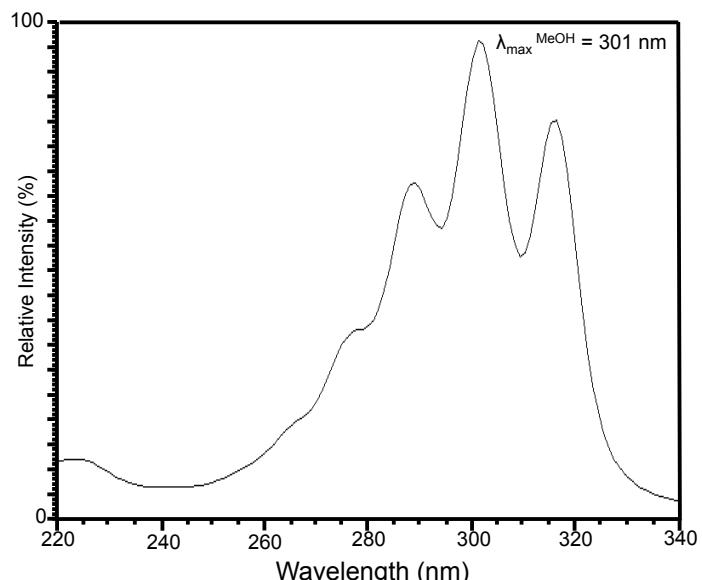

>99% purity, <1% double bond isomers

180 pg/aliquot

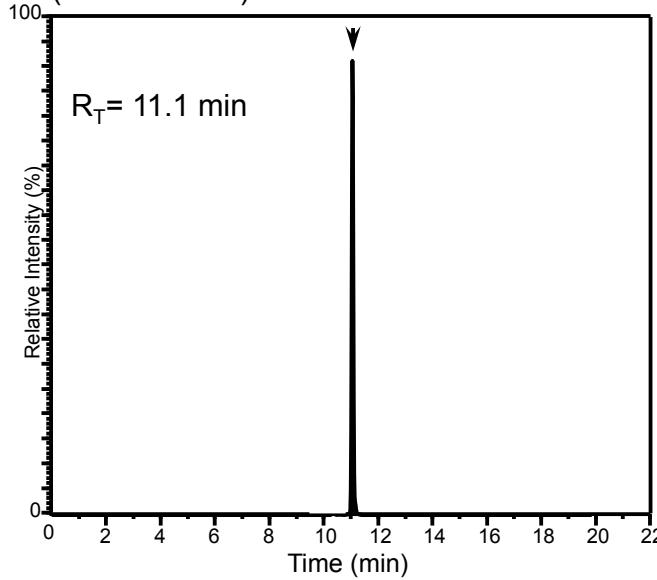

MRM chromatogram of AT-RvD1 standard (m/z 375>215)

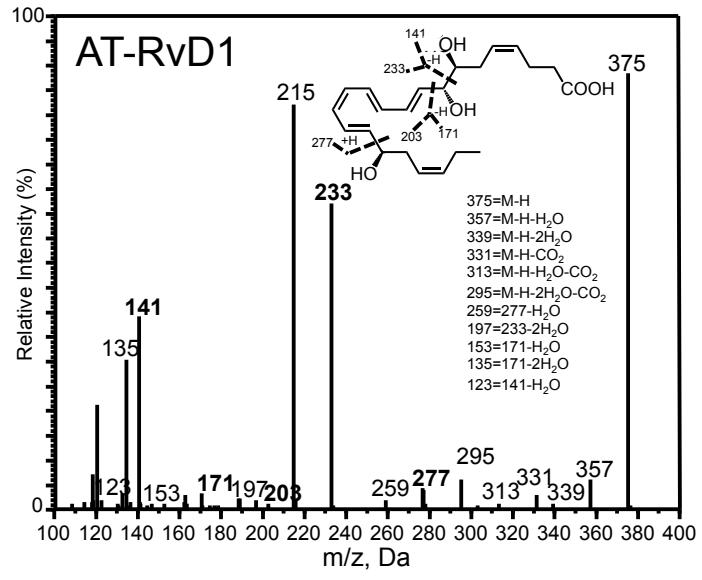

UV Chromophore of AT-RvD1 in methanol

MRM chromatogram of AT-RvD1 (m/z 375>215)

MS-MS Fragmentation spectrum of AT-RvD1

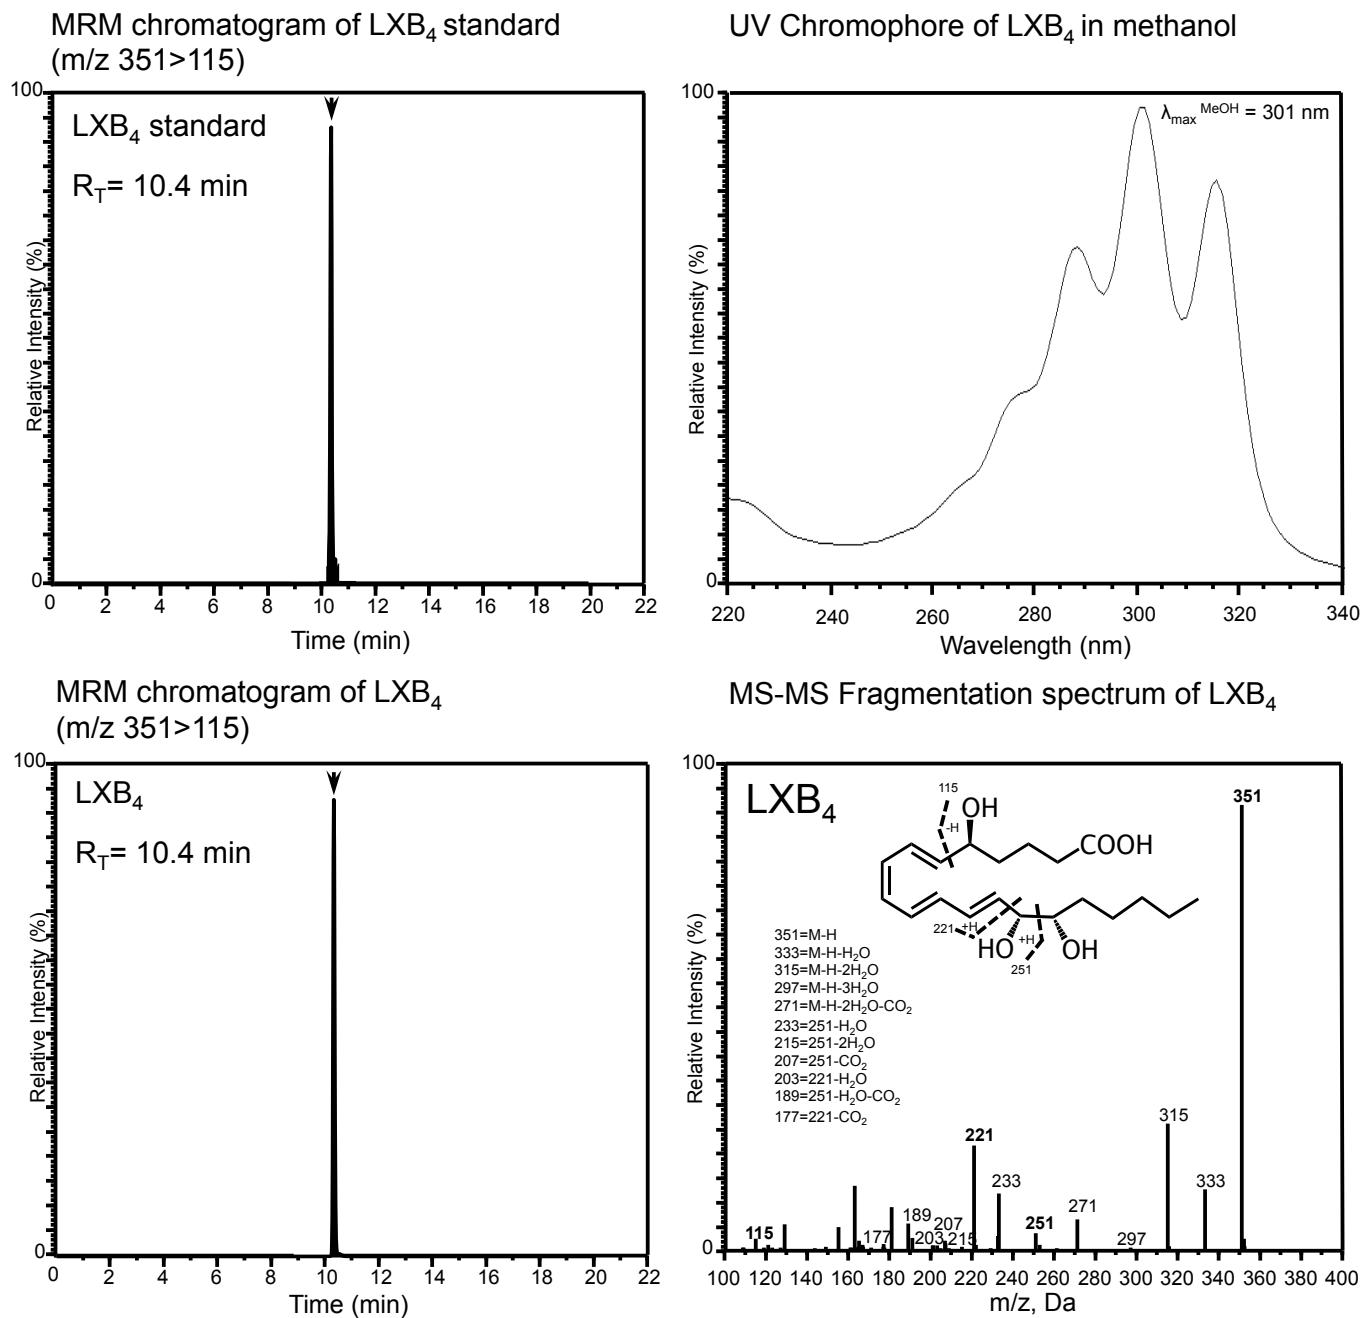

Supplementary data, Figure 1

LXB_4

>99% purity, <1% double bond isomers

30 pg/aliquot

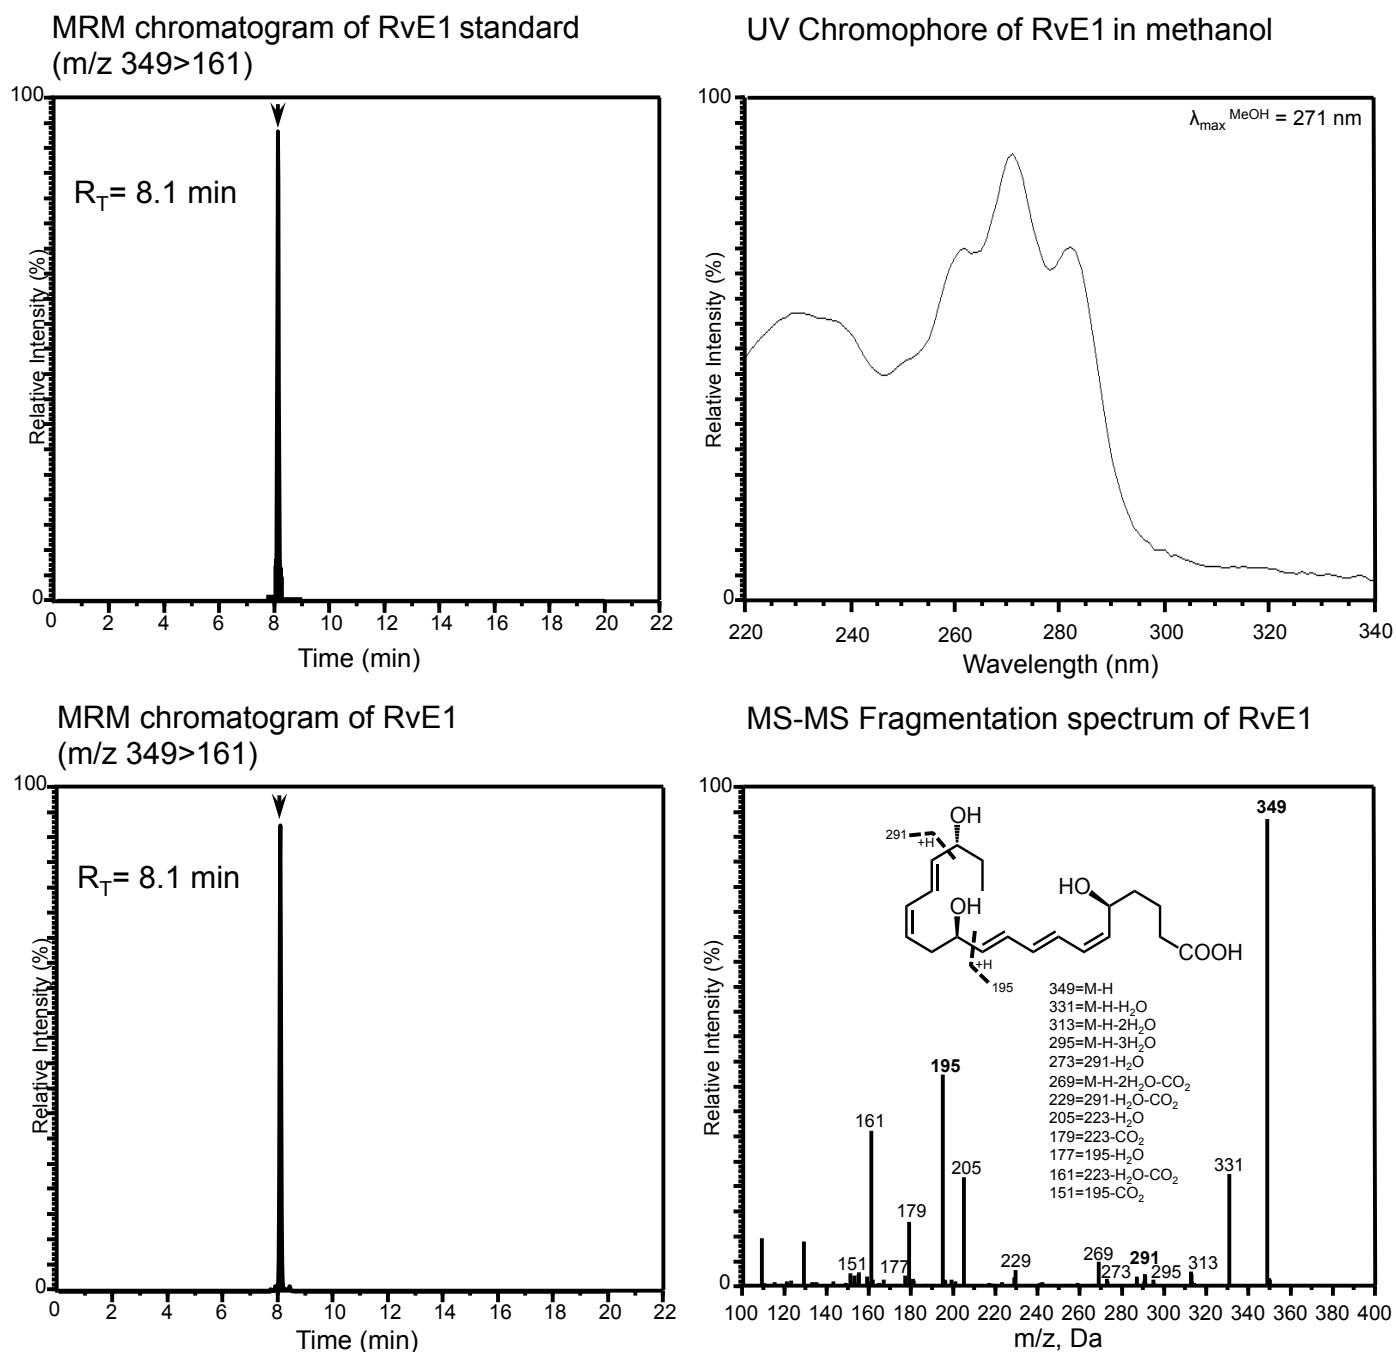

Supplementary data, Figure 1

RvE1

>98% purity, <2% double bond isomers

6 pg/aliquot

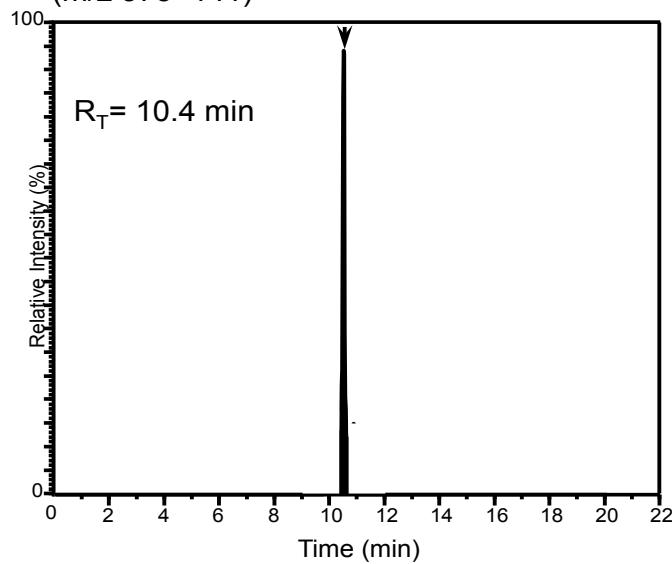

Supplementary data, Figure 1

RvD2

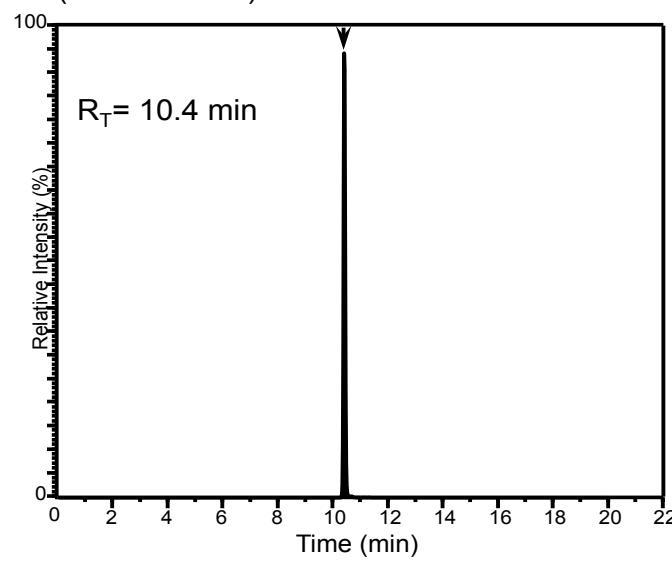

>98% purity, <2% double bond isomers

25.5 pg/aliquot

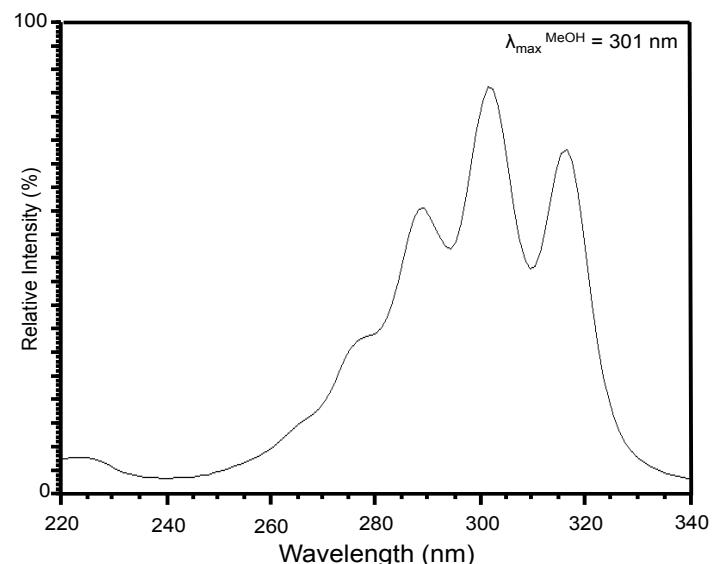

MRM chromatogram of RvD2 standard
(m/z 375>141)

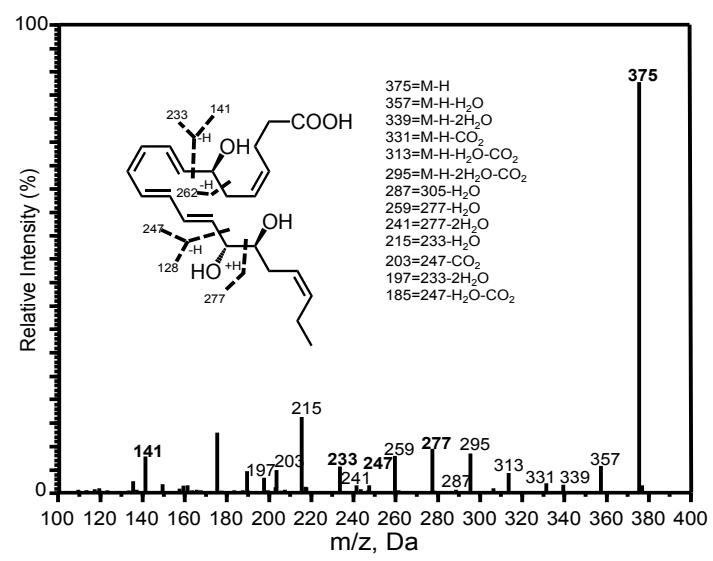

MRM chromatogram of RvD2
(m/z 375>141)

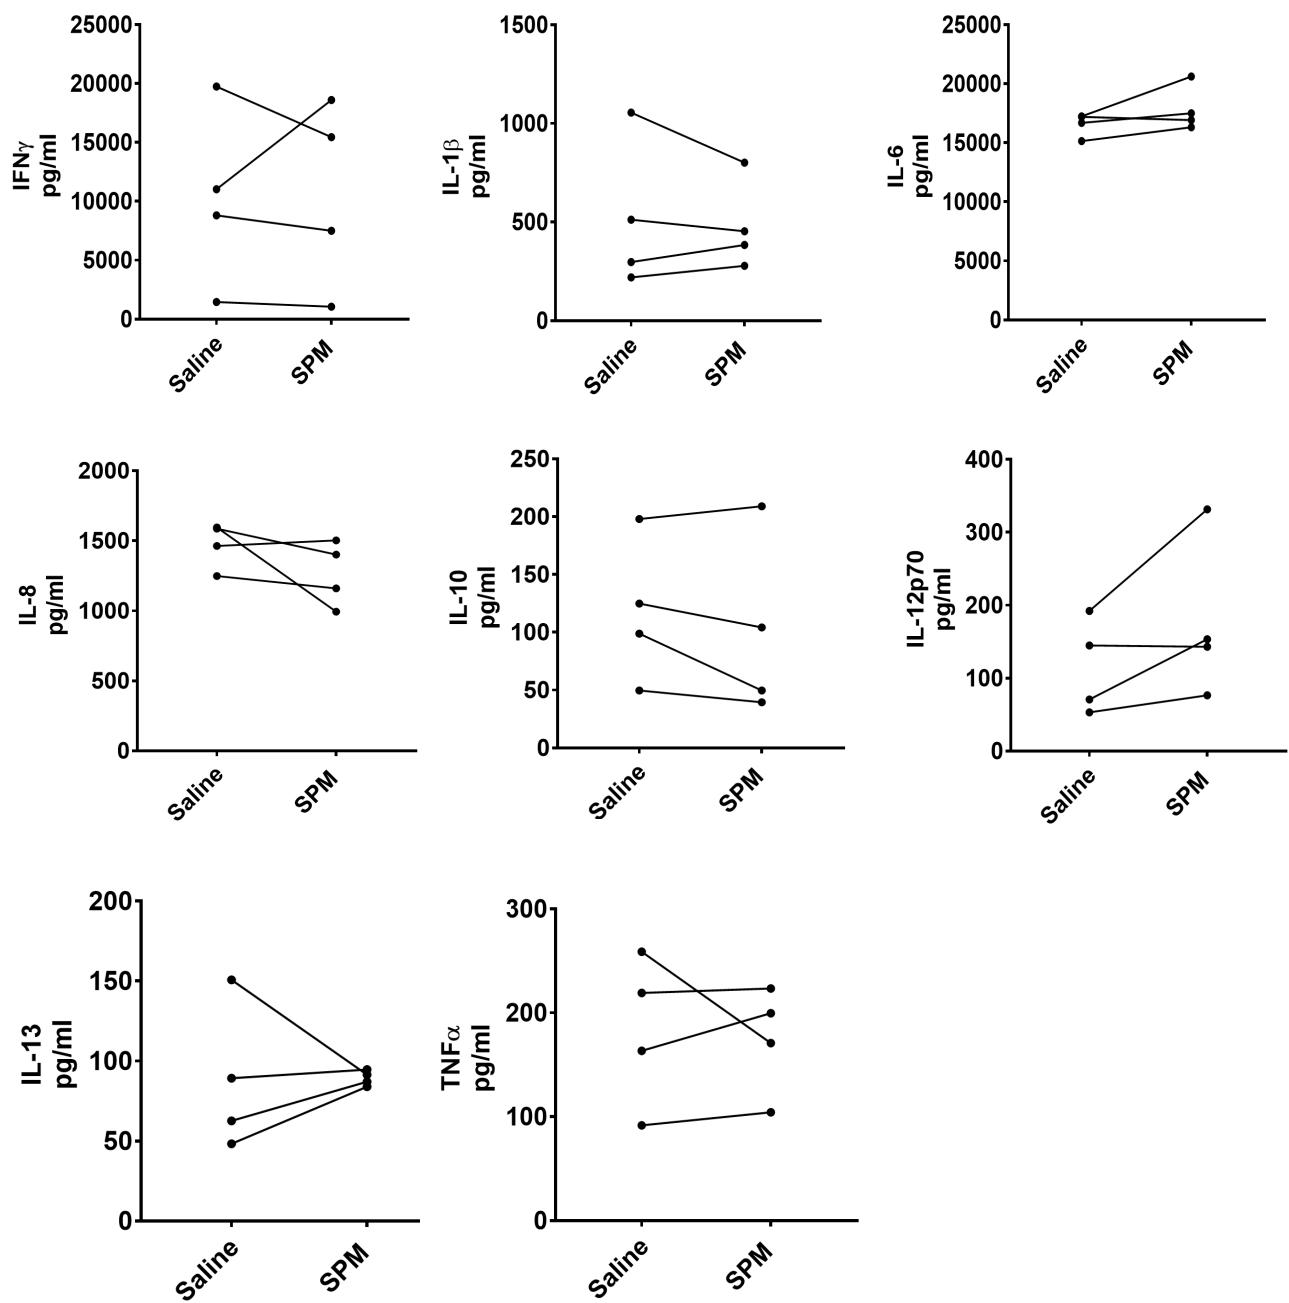

UV Chromophore of RvD2 in methanol

MS-MS Fragmentation spectrum of RvD2

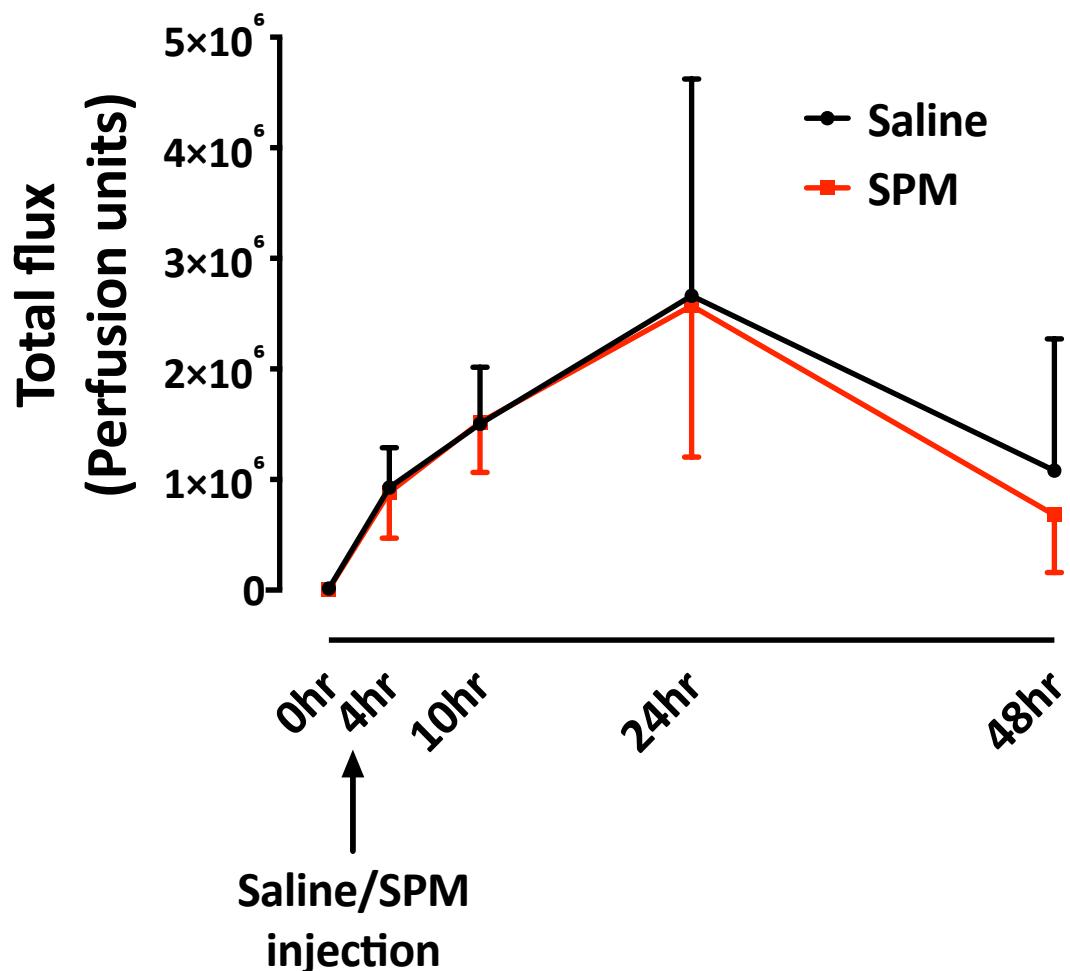

Supplementary data, Figure 2

Supplementary data, Figure 2. Actions of SPMs on inflammatory cytokine/chemokine levels in a model of dermal UVKEc-triggered acute inflammation.

Supplementary data, Figure 3

Supplementary data, Figure 3. Effects of SPMs on microvascular hyper reactivity as determined by laser Doppler.
