The greatest gift a parent can give a child during all the ups and downs of life is love.

— Doc Childre —

AZ QUOTES

The greatest gift a parent can give a child during all the ups and downs of life is love.

Grandparents
give the
greatest gift of all...

UNCONDITIONAL LOVE

Case history

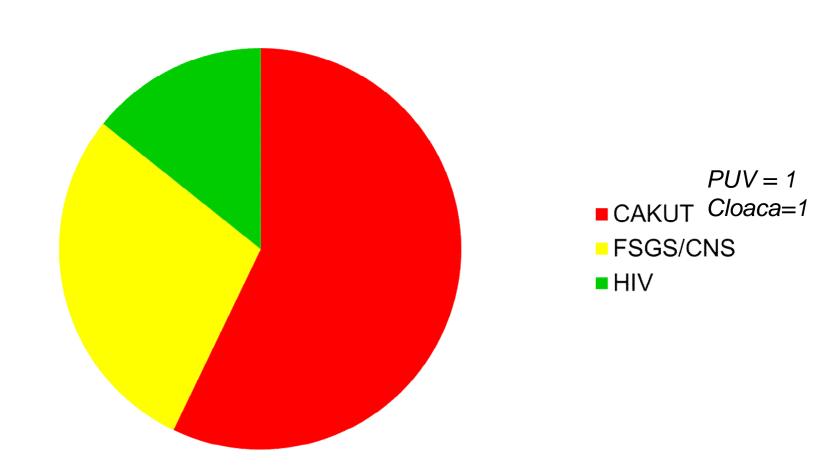

- 10 year old girl
 - ESKD on PD ?cause
- Maternal grandfather aged 50 years
- Out of centre referral as donor multiple vessels
 - 3 R + 3 L renal arteries
- UTI at 1 month
- PCr = 56 (eGFR = 95)

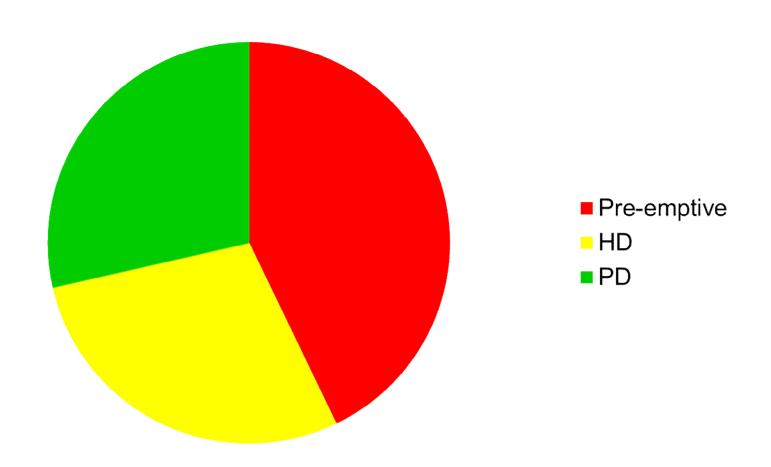

Paediatric recipients

- 7 children
 - between 8 September 2009 and 2 May 2017
 - 4 girls (57%); 3 boys (43%)
 - PCr = 353 526µmol/l; 2 retransplanted
 - aged 2.1 11.7 (median 6.9) years at transplant
 - weight of 10.8 46.9 (median 16.8) kg
 - 4 INTRAPERITONEAL (UNDER 20kg)
 - 4 outside referrals of complex cases
 - 2 COMPLEX RECIPIENTS "UNTRANSPLANTABLE"
 - 1 COMPLEX DONOR ANATOMY

Cause of ESKD

Modalities of ESKD

Grandparental donors

• 5 grandmothers (71%)

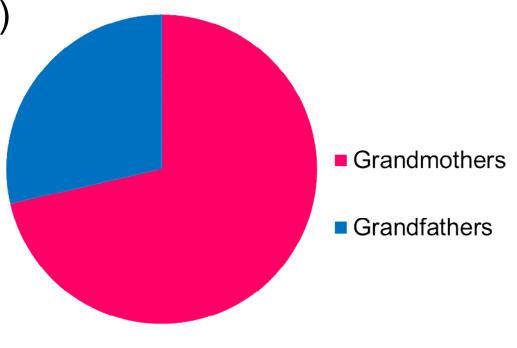

2 grandfathers (29%)

aged = 45 - 56(median 50) years

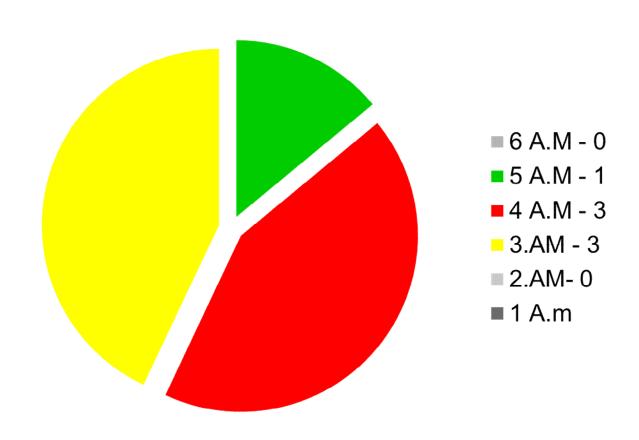

eGFR = 72 - 89(median 84) mls/min

all blood group compatible:

- 4 O DONORS TO O RECIPIENTS
- 3 O DONORS TO A RECIPIENTS

Mismatches

Why did the grandparents donate?

- 2 families wanted to use parents for subsequent LRD in future
- 2 psychosocial issues
 - father in prison, mother drug addiction, child protection issues and child cared for by grandmother (donor)
 - mother psychological issues, father absent;
 child cared for by grandmother (donor)
- 2 patients had failed parental LRD
 - other parent medically unsuitable
- 1 parent medically unsuitable; absent father

Recipient follow up

- Post-transplant follow-up
 - 1.0 months 7.5 years (median 2.8 years)
- 100% patient survival
- 86% renal allograft survival
 - retroviral disease
- Good renal allograft function
 - plasma creatinine of 56 92µmol/l
 - eGFR of 52 83mls/min/1.73m²

No acute rejection episodes

- 4 biopsies performed in 3 patients
 - no rejection
 - mild chronic changes

Conclusions

 Excellent patient and renal allograft survival with grandparental donors

- Improved outcomes
 - psychosocial input
 - post-transplant psychological evaluation
