ESM5. Macroscopic lithology description of RC13 (color and texture). The slice where abrupt changes occur in the lithological pattern, possibly corresponding to the change of the river phase – dam phase, is highlighted.

Prof. (cm)	Macroscopic description of sediments
0-4	Unconsolidated layer, as muddy appearance with a light brown color
4-18	A bit more consolidated, brown and slightly darker than the upper layer
18-26	More consolidated, darker brown than the upper layers
26-27	Sharp change of pattern to dark and fine sand
27-31	Grains of coarse sand with light color
31-35	Grains of fine sand with light color
35-38	Grains of coarse sand with light color
38-43	Coarse sand grains with dark color
43-50,5	Grains of fine sand with light color
50,5-52	Grains of fine sand with a dark color
52-53	Grains of fine sand with light color
53-56	Grains of fine sand with a dark color
56-59	Grains of fine sand with mixed light/dark color
59-72	Grains of coarse sand with very light color, whitish appearance

ESM6. Analysis of water content, density and total phosphorus for the Ribeirão do Campo reservoir (RC13). Dashed line indicates abrupt change at 26-27 cm. Below this line there were no diatoms. Depth assumed to be the year of construction of the dam (1958): 26 cm.

ESM7. Explanation of codes and full names for diatoms species.

Codes	Diatom full names and authorities
AAMB	<i>Aulacoseira ambigua</i> (Grunow) Simonsen
AAMJ	<i>Aulacoseira ambigua f. japonica</i> Tuji & D.M.Williams
AUGA	<i>Aulacoseira granulata</i> (Ehrenberg) Simonsen
AGAA	<i>Aulacoseira granulata</i> var. <i>angustissima</i> (Otto Müller) Simonsen
AHER	<i>Aulacoseira herzogii</i> (Lemmermann) Simonsen
AUPU	<i>Aulacoseira pusilla</i> (Meister) Tuji & Houki
AUTL	<i>Aulacoseira tenella</i> (Nygaard) Simonsen
AUL1	<i>Aulacoseira</i> sp.1
AUL7	<i>Aulacoseira</i> sp.7
