

# Community Severance Appraisal Tool

Paulo Rui Ancaes

Centre for Transport Studies  
University College London

20-05-2020

Transport and Health Study Group Meeting

**Severance is caused by road infrastructure**

## ...and motorised traffic

## ...and pedestrian crossing facilities

## Street Mobility Project (Jan.2014-Mar.2017)

Developed tools to understand and measure community severance

Project funded by:

**Main output:  
Street Mobility toolkit**

<http://www.ucl.ac.uk/street-mobility/toolkit>

## Project for Highways England (Nov.2017-Mar.2018)

Refinement of valuation method: stated preference survey

Hereford (A49)

305 participants

Hull (A63 and Ferensway)

348 participants

# EPSRC Impact Acceleration award + Transport for Greater Manchester funding (June-Dec.2019)

## Conversion of results as a tool

UCL

**TOOL TO VALUE REDUCTIONS IN  
COMMUNITY SEVERANCE  
CAUSED BY ROADS**

## Stated preference exercise 1

### Informal road crossing (varying road characteristics) vs. walking time

Now please look at this screen. Looking at the road conditions on the left, which of the three options would you choose?

Number of lanes in each direction	2
Central reservation?	Not present
Traffic density	Medium
Traffic speed	30mph

Option A	Option B	Option C
		<p>Don't make this trip</p>
<p>Cross at this point (not at pedestrian crossing)</p>	<p>Use covered over road Adds 8 minutes to your journey</p>	

Option A

Option B

Option C

## Stated preference exercise 2

### Informal road crossing (varying road characteristics) vs. money

Now please look at this screen. In this scenario, which option would you choose?

In this scenario, which of the two options would you choose?

Option A	Option B
Cross at this point Saving 40p off your bill	Do not cross the road and pay the current bill

Option A

Option B

## Stated preference exercise 3

### Formal road crossing (varying types of facilities) vs. walking time

Looking now at this road scenario and the four available options, what would you choose to do?

<p>Option A</p> <p>Use footbridge (with steps and ramp)</p> <p>Adds 3 minutes to your journey</p>	OR	<p>Option B</p> <p>Use pedestrian refuge</p> <p>Adds 10 minutes to your journey (plus 1 minute waiting time)</p>	OR	<p>Option C</p> <p>Use covered over road</p> <p>Adds 16 minutes to your journey</p>	OR	<p>Option D</p> <p>Don't make this trip</p>
---	----	--	----	---	----	---

# Avoiding pitfalls of stated preference studies

## Make sure participants understand attributes

Show videos to better illustrate the different traffic speeds

Show representations and photos of pedestrian crossing facilities

STRAIGHT PELICAN	STAGGERED PELICAN	PEDESTRIAN REFUGE	FOOTBRIDGE (with steps and ramp)	UNDERPASS (with steps and ramp)

# Avoiding pitfalls of stated preference studies

## Make sure scenarios are realistic

Which of the following are within walking distance of where you live, regardless of whether you go there or not? Please tell me whether there is one of these places within walking distance on your side of the A1079 Ferensway or within walking distance on the other side of the A1079 Ferensway or not within walking distance at all.

	Within walking distance, on my side of A1079 Ferensway	Within walking distance, on other side of A1079 Ferensway	Not within walking distance/not applicable
City centre	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Workplace	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A local corner shop/newsagent	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A supermarket	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A park (or playing field)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A local school or childcare facility	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A community centre or leisure centre	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A GP or health centre	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A chemist or pharmacy	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A pub, restaurant or café	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Train station	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Bus stop	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
The home of someone you know, e.g. friend or relative	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

## Customize questionnaire by trip purpose

Segment	Saving by crossing
Work	salary
Shopping	bill
	Pub, restaurant, or café
Leisure	price
	Park, playing field, community/leisure centre
	voucher
	House of someone
	bus fare

# Avoiding pitfalls of stated preference studies

## Consider other factors affecting choices

### Daytime scenario

Now please look at this screen. Looking at the road conditions on the left (at day-time), which of the three options would you choose?

Number of lanes in each direction	3
Central reservation?	Present (narrow)
Traffic density	Low
Traffic speed	30mph

Option A	Option B	Option C
		
Cross at this point (not at pedestrian crossing)	Use covered over road Adds 4 minutes to your journey	Don't make this trip

Option A

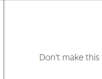

Option B

Option C

### Night-time scenario

Now please look at this screen. The road conditions are the same as in the last question but **now it's night-time**. Which of the three options would you choose?

Number of lanes in each direction	3
Central reservation?	Present (narrow)
Traffic density	Low
Traffic speed	30mph

Option A	Option B	Option C
		
Cross at this point (not at pedestrian crossing)	Use covered over road Adds 4 minutes to your journey	Don't make this trip

Option A

Option B

Option C

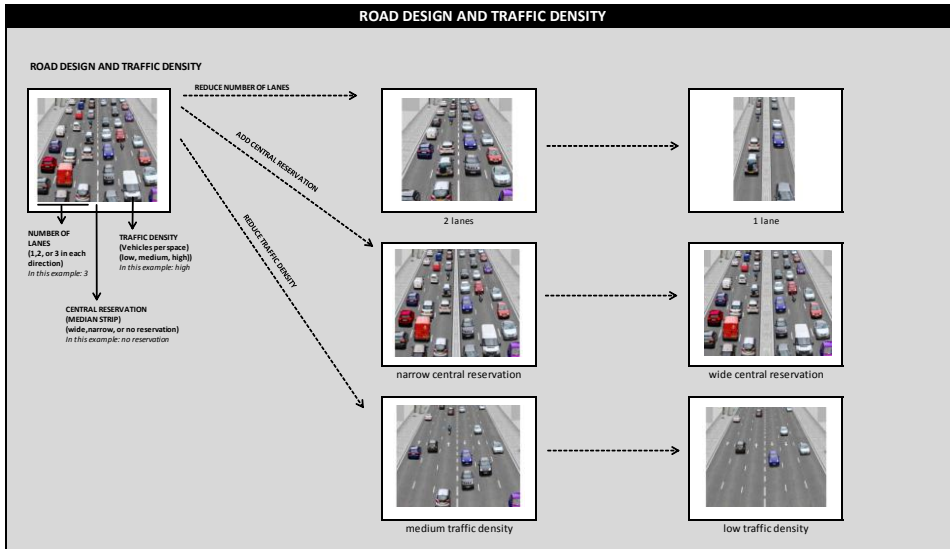

**TOOL TO VALUE REDUCTIONS IN  
COMMUNITY SEVERANCE  
CAUSED BY ROADS**

ROAD DESIGN AND TRAFFIC DENSITY

TRAFFIC SPEED

The following values are supported:  
When choosing inputs, please consider that traffic speed depends on traffic density  
The combination of high traffic density with 40mph is unrealistic, because of congestion

10 mph	16 km/h
20 mph	32 km/h
30 mph	48 km/h
40 mph	64 km/h

CROSSING FACILITIES

The tool supports the assessment of the crossing facilities represented below  
The tool does not support the assessment of zebras (marked unsignalised crossings) or signalised crossings other than pelicans (e.g. puffins, toucans)

**PEDESTRIAN PLATFORM**  
A place where the road goes through a tunnel and pedestrians can cross at the surface

**PEDESTRIAN REFUGE**  
Combination of a traffic island with dropped kerbs (and possible colour/tactile warnings). Not signalised

**STRAIGHT PELICAN**  
Signalised crossing where user can push button to wait for green

**STAGGERED PELICAN**  
2-stage pelican crossing, with an offset in the middle. Also known as Danish offset

**FOOTBRIDGE**  
Bridge over road, with steps and ramp

**UNDERPASS**  
Subway under road, with steps and ramp

## DESIGN

In the Quick tool, you specified the general **road and traffic characteristics** in the Do-Nothing and in the 3 options. In this page, you can add more detail by changing these characteristics in some parts of the road segment

You can also identify the parts of the road where there are **guard railings** or other physical barriers to movement across the road

TIP: You may want to assign a slower speed and higher traffic density near junctions, to account for cars platooning at traffic signals. Near junctions, the number of lanes may also increase.

TIP: A traffic island for pedestrians may exist in a specific point along the road. That counts as a "central reservation"

TIP: The default is what you specified in the Quick page. Click on the CLEAN buttons to revert to the default

In the Quick tool, you also specified the **crossing facilities** that exist in the extreme points of the road segment and in the middle point, in the do-nothing and in the 3 options.

In this page, you can add more detail by specifying crossing facilities that are not in those points.

If you choose signalised crossings or pedestrian refuges, you can also add average waiting time for pedestrians to cross the road

Legend:

- Pedestrian refuge
- Straight pelican
- Staggered pelican
- Footpath
- Underpass

Add information about road and crossing facilities in the road segment representations below

The 2 extreme points and middle point of the segment are identified above the representation. Below, you can see the distance from each point to the left extreme point of the segment

■ TIP: Press the CLEAN button to copy over the default values for the whole segment that you specified in the Direct page. You can then change the cells one by one, as required

### DO NOTHING

## OUTPUT

### OVERVIEW OF SEVERANCE ASSESSMENT

Option highlighted in green is the best option

	Do-nothing	Option 1	Option 2	Option 3
Overall severance index (0-100)	50	37	42	55
Severance cost per trip	£1.46	£1.04	£1.23	£0.96
Average delay to walking trips	239	190	217	212
Average delay to walking trips	1.8	1.4	2.2	2.0
Trips crossing informally/year	46,328	470,822	187,205	13,960
Trips crossing informally/year	5,507,341	3,120,045	5,427,918	1,866,666
Severance trips/year	46,328	470,822	187,205	13,960
Total severance cost/year	£5,207,313	£1,708,294	£4,905,296	£2,964,130
Benefit of the option (£/year)	£4,986,383	£1,000,000	£1,000,000	£1,000,000
Present value of benefit over the lifetime of the project	-	£8,813,287	£6,905,629	£10,515,900

### DETAILED SEVERANCE ASSESSMENT

Places highlighted in pink have severance index above 50%  
Places highlighted in red have severance index above 75%

### DO NOTHING
