Figure S1 Plots of raw data (●) and 5th, 50th and 95th percentiles (—) of estimated fetal weight (EFW) as a function of gestational age in (a) dichorionic diamniotic and (b) monochorionic diamniotic twin pregnancies. The percentile values are derived from the statistical models for Log_{10}(EFW). 95% CIs are shown for the 50th percentile (·····).
