

Table 4 Pearson correlations relating to livebirth and partners' ages after converting the data on livebirth to individual cycles (compare with Table 2a). The number of IUI cycles = 856 for each correlation.

	<i>r</i>	<i>P</i>
Female age v livebirth	- 0.151**	< 0.001**
Male age v livebirth	- 0.075*	0.028*
Male age v female partner's age	0.516**	< 0.001**
Male age after controlling for the effect of female age by partial correlation	0.003	0.926
