Figure 1: Main CO_2 emission drivers for the first 3 SSP scenarios. In color, the range spanned by SSP marker models, in grey (and delimited by black lines) the one of the models participating to this study. First row ($\mathbf{a}$ – $\mathbf{c}$): yearly world population. Second row ($\mathbf{d}$ – $\mathbf{f}$): yearly world GDP (PPP) per capita. Third row ($\mathbf{g}$ – $\mathbf{i}$): yearly world primary energy supply per unit of GDP (PPP). Fourth row ($\mathbf{j}$ – $\mathbf{l}$): yearly world CO_2 FFI emissions per unit of primary energy supplied. Central black lines are means across models.
